

Pcodeall.csv (and subsets y56 / y58 / y59 / y60 / y61 / y62 / y63 / oth / wsn)

Description:

ODS Postcode Directories

Contains:

UK Postcodes linked to Integrated Care Boards (ICB) and Primary Care Organisations (e.g. Sub ICB Locations or Local Health Boards) that are responsible for the area they fall within. The ODS Postcode Directories can be considered as reduced versions of the NHS Postcode Directories (filenames prefixed 'grid...') which are detailed in their own section.

The data is made available in a range of different files: one full file which provides ALL postcodes in the UK (along with their associated organisations) and then a series of other files that provide the same data but separated out to cover various parts of the country. This is done to make use of the data more practical due to the sheer size of the full file. Note that the basis for this geographical split is the areas covered by NHS England (Region, Local Office).

The filenames and their content ranges are as follows:

Filename	Contents
Pcodeall.csv	Postcodes in England, Wales, Scotland, Northern Ireland, Isle of Man and the Channel Islands
Pcodey56.csv	Postcodes in London Commissioning Region
Pcodey58.csv	Postcodes in South West Commissioning Region
Pcodey59.csv	Postcodes in South East Commissioning Region
Pcodey60.csv	Postcodes in Midlands Commissioning Region
Pcodey61.csv	Postcodes in East of England Commissioning Region
Pcodey62.csv	Postcodes in North West Commissioning Region
Pcodey63.csv	Postcodes in North East and Yorkshire Commissioning Region
Pcodewsn.csv	Postcodes in Wales, Scotland and Northern Ireland
Pcodeoth.csv	Postcodes in the Channel Islands and Isle of Man, unallocated postcodes and pseudo codes

How Maintained:

The geographical mapping information for NHS organisations is maintained by the ONS in conjunction with Ordnance Survey and various other Health organisations in the UK (including ODS).

The NHS Postcode Directory (NHSPD) is derived from the National Statistics Postcode Directory (NSPD), which itself is based upon the data set produced by the Gridlink Consortium (ONS, Ordnance Survey and Royal Mail). Royal Mail provide a monthly list of all current postcodes, to which ONS add temporary 'imputed' grid references where necessary and OS then update with accurate, surveyed grid references. To this 'core' dataset of postcode, grid reference, ward code and health area code, ONS add information on a wide range of administrative, statistical and other geographies based on maintained digital boundaries and the OS-supplied grid references. This is produced quarterly as the NSPD and a subset of this information is produced as the NHSPD.

File Format:

The pcode....csv range of files DOES NOT follow the template in Table A.4 a. The template should be disregarded for this file and the table below taken as a diagram in its own right:

Column	Field Content	Max length	Notes
1.	Postcode	8	
2.	High Level Health Geography	5	The ICB code for each postcode. Pseudo codes are included for Wales, Scotland, Northern Ireland, Channel Islands, and Isle of Man. The field will otherwise be blank for postcodes with no grid reference. QAA – QZZ, A0A0A-Z9Z9Z = England; 7A1-7A7, A0A0A-Z9Z9Z = Wales (LHB); SA9 - SZ9 = Scotland (HB); ZB1 = Northern Ireland (HSCB); YAC = Isle of Man (HA); YAD - YAF = Channel Islands (HA); null = no information available
3.	Primary Care Organisation of Residence	5	The code for the Sub ICB Locations in England, LHBs in Wales, CHPs in Scotland, LCG in Northern Ireland and PHD in the Isle of Man; there are no equivalent areas in the Channel Islands (for which a pseudo code is included). The field will be blank for postcodes in England or Wales with no grid reference. 00A-99Z, A0A0A-Z9Z9Z = England (Sub ICB Location); 7A1-7A7, A0A0A-Z9Z9Z = Wales (LHB); 001-043 = Scotland (CHP); ZC1-ZC5 = Northern Ireland (LCG); YK1 = Isle of Man (PHD); X98 (pseudo) = Channel Islands (and also in conjunction with pseudo country postcode); null = no information available
